## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 50 is rejected under 35 U.S.C. 103(a) as being unpatentable over Campbell (GB 303,593, previously cited) and Hubbard et al.

Campbell discloses the claimed device except it is unclear if the opposing lateral edges comprise heat seals. Hubbard et al. discloses that it is known in the art to form analogous bladders from two flat sheets heat sealed together along their outer peripheral edges. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the hot water bottles of Campbell by heat sealing two flat sheets together along their outer peripheral edges, as in Hubbard et al., in order to provide a hot water bottle that is leak-proof/leak-resistant along its edges. Furthermore, applicant has not disclosed that heat-sealing along lateral edges of a bag solves any stated problem or is for any particular purpose and it appears that the Campbell invention would perform equally well with heat seals along its edges.

Furthermore, the edges extending from the left and right side of the funnel-like portion in Campbell comprise a substantially S-shape to the same degree as claimed.

### ***Response to Arguments***

3. Applicant's arguments filed 04/06/2005 have been fully considered but they are not persuasive.

In response to applicant's arguments against the references individually, particularly the argument that the Campbell reference does not disclose heats. One cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). In this instance, the rejection is based on the combination of Campbell and Hubbard et al.

Regarding applicant's argument that Campbell does not show first and second lateral edges both substantially S-shaped, the Examiner maintains that the left and right side of the funnel-like portion in Campbell comprise a substantially S-shape. The terms "comprise" and "substantially" in applicant's claims do not preclude the shapes or lines that are adjacent to S-shapes in Campbell to form the hot water bottles into particular configurations.

### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
